

Advanced Configuration Options

LifeTO comes with a set of custom configuration options that aren't available in the original game. Currently, you can make the game save the last password, swap the Fn and number row keys of the Quick Slot window, and have drill results logged in chat. **In general, the new settings program (Setup.exe) can automatically generate this file for you, so you don't need to manually do these steps. This guide is still updated for advanced users, however.**

Advanced Users

The configuration file is described in the TOML file format. In layman's terms, it is a text file with a special structure that contains the settings for the game's advanced options.

By default, LifeTO does not ship with a configuration file. You must create one yourself using Notepad or any other text editor with the filename `lifeto.toml`. The file should be in the same folder as `Splash.exe` and `Trickster.bin`.

The default configuration is as follows:

```
[qol_fixes]
save_last_password = false
quick_slot_fn_swap = false
drill_result_in_chat = false
```

Valid Configuration Values

Header	Name	Description	Valid Values
<code>[qol_fixes]</code>	<code>save_last_password</code>	Saves the last password unencrypted	<code>true</code> : <u>save</u> passwords <code>false</code> : <u>don't save</u> passwords
<code>[qol_fixes]</code>	<code>quick_slot_fn_swap</code>	Swaps the Fn keys and the number row of the Quick Slot window	<code>true</code> : <u>enable</u> the swapped keybinds <code>false</code> : <u>don't enable</u> the swapped keybinds
<code>[qol_fixes]</code>	<code>drill_result_in_chat</code>	Logs drill results in chat	<code>true</code> : <u>log</u> results in chat <code>false</code> : <u>don't log</u> results in chat

Step-by-Step Guide

1. Open *Notepad* or your favorite text editor. This guide will assume the use of Notepad.
2. Copy and paste the default configuration above (all of the code from the "default configuration" section) into Notepad.
3. Go to *File > Save As...*
4. Browse to the game's main folder, where *Splash.exe* and the `data` folder are located. Do not enter the `data` folder. (Please note that you will not be able to see any of the game's files until you follow the next step, so don't panic if you don't see anything other than `data`.)
5. Change the *Save as type* to *All Files (*.*)*
6. Type in `lifeto.toml` for the file name
7. Press *Save*
